PRODUCT OF GENERAL MOTORS OF CANADA, LIMITED

Third Fortnightly Crop Report

 Issued by Department of Agriculture,
 Government of Alberta, June 9

Crops throughout the province have been greatly benefited by rains which have fallen over a large area during the past week, according to telegraphic reports received on Friday by the Department of Agriculture. While the situation had not generally become acute, rains were urgently needed in a number of districts in the Province and the recent precipitation has removed the cause for anxiety from this source for some little time. Soil drifting has been checked in the southern part of the Province where some damage of this kind had occurred and late-sown grain is germinating much more uniformly with the additional moisture in the soil. Early crops are now covering the ground in many districts and will make the best use of the soil moisture. Alfalfa on irrigated land is reported to be doing exceptionally well. Fall wheat had full eye are in head in the south, but the yield will be reduced in a number of districts as a result of the dry period.

In the central and northern sections of the Province all crops on summer-fallow have made good growth, but those on fall and spring plowing are somewhat patchy. In some places, seeding of coarse grains is practically completed with the exception of green feed. Following the recent rains additional acreage is being seeded to oats and barley on land which would have been followed if dry weather had continued. The fact is every indication that the total acreage in crop in the Province will show an increase over that of 1927 in spite of the small amount of fall plowing done.

Crops in the Peace River district have made rapid growth and are showing good promise. An increase from 12 to 15 per cent. in crop acreage is reported this year in the district, largely owing to the amount of new land cleared and brought into cultivation. Wireworms are doing considerable damage in some sections of the Peace River, but losses are reported to be no heavier on the average in previous years. Tree growth has suffered heavily from the attacks of caterpillars in some districts east and south of Edmonton. Pastures which were in need of rain are showing new growth and livestock is generally in good condition.

Z. McIlroy Called By Death.

The Alberta Government and a wide host of friends and associates throughout the Province are mourning the death of Z. McIlroy, for the past fifteen years assistant deputy minister of agriculture, who died at his home in Edmonton on June 3, following an illness of some two months. In addition to his duties in the department, Mr. McIlroy for the past two years had been in charge of the administration of the Debt Adjustment Act and in this connection had done splendid work. High tributes to his efficiency and sense of public duty have been paid by Hon. George Hoodley and H. A. Craig, minister and deputy minister of agriculture, and his many other associates in the work of the Government.

**Test Value of Chemical Weed
Destroyer**

A series of tests to determine the value of two chemical preparations in the destruction of Canada Thistle, Sow Thistle and Quack Grass is being conducted at a number of points in the province under the direction of Field Crops Commissioner W. J. Stephen. The first of these, known as the Chipman Atlas Non-poisonous Weed Killer, is manufactured in the United States and the second is a preparation formulated by A. W. Wadden of Glensford, Alberta. The first trials of the efficacy of these chemicals were made on a number of plots in the vicinity of Edmonton on June 8 and additional tests will be made at a number of points before any announcement is made as to their value.

**Alberta Dairy Commissioner To Attend
World's Congress**

Alberta will be represented at the World's Dairy Congress which opens in London, England, on June 25, by Dr. C. P. Marker, Dairy Commissioner for the Province. Dr. Marker is acknowledged to be one of the outstanding authorities in dairy work on the continent and his efforts have been largely responsible for the high position secured and held by Alberta dairy products in both domestic and export markets. His assistance to Danish people in western Canada was recognized some few years ago by his appointment as Danish vice-consul for Alberta and by having the title of Knight of Dannebrog conferred on him by the King of Denmark, and the University of Alberta in 1924 conferred on him the honorary degree of L.L.D. in recognition of his services to the agricultural industry in the province. Following the Congress, Dr. Marker will visit a number of points in the British Isles and in Denmark and expects to bring back information which will be of benefit to Alberta's dairy industry.

LEGAL NOTICE
Village of Oyen

NOTICE IS HEREBY GIVEN that if all arrears of taxes imposed in 1927 in respect of any parcel of land situated within this municipality are not paid prior to the Second day of July next, such land will be dealt with under the provisions of the Tax Recovery Act, 1922, with a view to obtaining certificates of title in the name of the municipality in respect of such parcel.

 F. G. HILSE,
 Secretary-Treasurer,
 Village of Oyen.

S. A. MILLER
FARM FOR SALE

The Soldier Settlement Board of Canada offers for sale by Public Tender:

The South Half of Section Nine (9), in Township Twenty-four (24), Range Three (3), West of the Fourth Meridian, comprising all mines and minerals.

Terms of sale are not less than 20 per cent. of the purchase price in cash on acceptance of the tender, and the balance in from eight to ten equal annual instalments, with interest at 4 per cent. per annum on the amortization plan.

Each tender must be accompanied by an accepted cheque for \$100. If tender is accepted, this sum will be credited to the purchase price of the land. If tender is not accepted, the money will be returned to the tenderer.

Tenders will be opened at CALGARY, Alberta, on THURSDAY, June 21, 1928.

The highest or any tender not necessarily accepted. If the land is not sold on the date above mentioned, the Board will be prepared to receive offers to purchase until such time as it is finally disposed of.

Tenders should be in plain envelopes marked "Tenders for the purchase of the S/4 2232, West of the Fourth Meridian."

Address tenders and enquiries to:

East Is Coming West

The recently announced decision of the General Motors Corporation of Canada to proceed immediately with the erection of a million dollar manufacturing and assembly plant at Regina is gratifying news, not alone to the citizens of the capital city of Saskatchewan, but to all Westerners, because it indicates that at long last the leaders of industry in the East have come to a realization of the fact that they cannot continue indefinitely to supply the rapidly growing western market from factories located thousands of miles away, and compelling the western purchaser to pay greatly enhanced prices by reason of freight charges based upon the high classification imposed upon finished articles.

Western people have contended for some time that the logical industrial development of Canada is the establishment of branch factories in the West. There was a time, not more than a couple of decades ago, when the view prevailed that the western market could be supplied not only from Eastern factories, but from Eastern wholesale houses. Gradually, as western population grew and the volume of business increased, branch wholesale houses were opened in Winnipeg, and since they have gradually spread all over the West, until today wholesale establishments located in all the larger western cities of population very largely supply western needs.

The same development which thus characterized the business of wholesaling and distribution must inevitably now follow in the work of manufacturing itself. Freight charges on the transportation of necessary raw materials into the West are substantially lower than charges on the finished products, while the opening of western factories may, and in all probability will, encourage the production for use of certain raw products of the West which till now have been a lack of market.

The decision to locate branch industries in the West is furthermore pleasing to Western people because it indicates recognition by Eastern industrial leaders of the fact that, if they are to command the support and sympathy of the West, and if past times of separation between east and west are to be wiped out, and a new national viewpoint developed, the East cannot continue to merely accept the cream of western trade and profits in years of good crops and times of plenty, but must come west and throw in their lot more wholeheartedly with the people here, and share in the hardships of lean and abounding prosperity, also carry their share of the burden in years of slim crops and business depression.

With wonderful activity prevailing in the work of prospecting and developing the immense mineral areas of the northern portions of the three prairie provinces, with large schemes of power development now receiving attention, and with the new, larger, more national viewpoint gaining headway among the financiers and industrial leaders of the East, there is every reason for saying that a new era in the history of Western Canada is opening.

While the West will long continue to excel as an agricultural country, and will steadily expand its annual production from its rich prairie lands, it seems safe to predict that from the time onward industrial development will move along in keeping with the agricultural growth and mineral development of the country.

Such development offers the best and most practical solution of one of the West's big problems, namely, the unemployment difficulty which annually presents itself because of the seasonal nature of the basic industry of this country. In this connection it is pointed out that the "peak" period of production in Regina's new industry will be in the late winter and early spring months, before active outdoor building operations, railway construction and road making gets under way, and when under present conditions unemployment is at its maximum.

Viewed from all standpoints, therefore, the whole West can unite in welcoming the momentous decision of one of Canada's greatest industrial concerns to establish a large branch plant in the heart of the prairie west. Its action will be the forerunner of many similar decisions by other large manufacturers, and a resultant development from which every Western center, and every Western citizen, will benefit.

Alberta Sells Railway

Purchasers Offer Rights and Titles To The Lacombe and North-Western Railway

A cheque for \$1,510,282.29, turned over to the provincial treasurer of Alberta, by the Canadian Pacific Railway, on May 10th, purchased the Lacombe and Northwestern Railway. The company obtained full possession, right and title of the latter property, with all securities and capital stock of the land of the company. The new directors are: C. C. Coleman, vice-president of the Canadian Pacific; G. A. Walker, solicitor at Calgary; George Fox, superintendent at Edmonton; C. D. Porter and George Hutton.

"A GREAT TONIC," SAYS MRS. RUSSELL

After Taking Lydia E. Pinkham's Vegetable Compound

Fewell, Ont.—"I am taking Lydia E. Pinkham's Vegetable Compound during the change of life for nervous feelings, loss of appetite and to gain strength. It is a great tonic and I have taken a dozen bottles of it. I am feeling better and I can do my work as usual. I recommend it to all women for such troubles as come at this time."

—MRS. W. V. FEWELL, R. F. No. 6, Fewell, Ontario.

W. N. O. 1737

Air Patrol On Hudson Straits

Straits Open For Navigation Much Earlier Than Ever Friends Of Route Anticipated

Flying operations have been resumed in Hudson Straits, and reports from the air reveal that the ice has already cleared out of the eastern end of the channel and is broken up in the centre and western waters. It is the opinion of the air men and marine officials stationed in the straits that an ice breaker could open a channel right through the straits at present. No ice breaker is available, but the department announces that a vessel of this type will be available before next spring.

The time when the straits will become easily navigable is as yet doubtful, but it is quite clear that ice conditions are not nearly so heavy a handicap as has always been supposed and that the straits will be open much earlier than even the friends of the route anticipated.

AVOID THE PAINS OF RHEUMATISM

This Trouble Comes Through Weak, Watery Blood

Many people suffer rheumatic pains which could be avoided by keeping up the blood. Rheumatism comes with this watery blood. It can be driven out of the system by enriching and purifying the blood.

Many of our people are afflicted with this trouble. It is called "rheumatism" and it is caused by a weak, watery blood. It is the result of a poor diet, and of a life of idleness. It is the result of a life of idleness. It is the result of a life of idleness.

My points were badly swollen, and my legs so stiff they would hardly support my body. At this stage I read of Dr. Williams' Pink Pills and decided to try them. The result was that I was finally laid up with rheumatism. I could hardly stir, and I was confined to bed. Medicine seemed to have little or no effect and the worst encouragement the doctor gave me was that with the coming of warm weather I would be better. But I was not. I was not. I was not.

Great West Airways

First Commercial Flying Company On Prairies Is Established At Calgary

Backed by many of Calgary's prominent citizens, managed by Capt. H. McCall, D.S.O., M.C., I.R.C., and known as the Great West Airways, Limited, the first commercial flying company on the prairies west of Winnipeg, is expected to be in operation within one month, with Calgary as base, it is announced. The objects of the company are to engage on the business of aviation in all its branches, including the giving of instruction to pilots and air engineers.

For Sprains and Bruises.—There is nothing better for sprains and contusions than Dr. Thomas' Electric Balm. It will reduce the swelling that follows a sprain, will soothe the inflamed flesh and draw the pain. It will take the ache out of a bruise by counteracting the inflammation. A trial will convince any who doubt its power.

Britain's Air Mail Powers
Air mail activities in Britain are growing rapidly. Letters dispatched from London last year totalled 27,000 pounds, as compared with 17,000 in 1926. Air parcels were 74,000 pounds in 1927, and only 55,000 in 1926. Ten thousand pounds of letter mail were carried to European destinations alone in the past 12 months.

Many people are almost crippled with corns. But it is needless suffering which can be greatly ended with Holloway's Corn Remover.

Many men who complain about playing second fiddle ought to be glad they are in the orchestra at all.

BOILS.

Minard's will dry up boils. It kills the inflammation and discharges.

Minard's "KING OF PAIN" is a powerful remedy for all kinds of pain, including rheumatism, neuralgia, and other conditions.

The Ideal Milk for Baking

doubly rich and creamy. Adds richness and flavor to every recipe

Another New Job

Airplane Dispatchers Will Use Radio To Keep In Touch With Machines

Radio has paved the way for another new job—the airplane dispatcher. Most of the predecessor, who is responsible for the operation of trains without conflict in schedules, his task will be to keep airplanes going in the right direction and to give aid in cases of emergency. But the land wires the train director uses are not to be part of the system. Radio will be the connecting link between ground and airplane.

The equipment that again will bring radio to the aid of the pilot, with another of man's twentieth century accomplishments is being installed in the western sector of the transcontinental route. Ground radio stations are being set up, and a dispatcher will be in charge of each one.

Most of the direction by radio will be done at night, when the plane's pilot must depend on his compass or light beacons operated at intervals along his route. These beacons are erected on towers, and contain lights with a candlepower of 4,000,000.

With intermediate fields not further apart than thirty miles, and each equipped for dispatching by radio, the new service will remove much of the isolation from air transportation.

New Market For Purebred Hogs

B.C. Branch Of Canadian Swine Breeders' Association Cultivating Market In Antipodes

For the past year the secretary of the B.C. branch of the Canadian Swine Breeders' Association has been engaged in seeking new markets for purebred hogs, paying special attention to Australia and New Zealand. As a result many demands have been received, interest being stimulated by New Zealand's removal of the embargo on stock with a clean bill of health.

No Rest With Asthma.—Asthma usually attacks at night, the time when rest is needed most. Hence the loss of strength, the nervous debility, the loss of sleep and the loss of appetite must be expected unless relief is secured. Fortunately, however, it is possible. Dr. J. D. Kellogg's Asthma Remedy has proved its merits through years of service. A trial will surely convince you.

Labor Shortage In Dawson

There is a scarcity of labor in the Yukon, particularly in Dawson and White Horse. Fifty to seventy-five laborers are needed during the summer season until the mining camps shut down about the first of October. The work offering is on dredges, hydraulic and around mining camps. Longshoremen's work is somewhat irregular later in the season, but fairly steady while ore shipments from Mayo are in progress. Wages on the Dawson coast are from 90 cents per hour to one dollar.

A safe and sure medicine for a child torn with worms is Mother Graves' Worm Exterminator.

Gold Medal For Edison

His 1928 gold medal for Science has been awarded by the Society of Arts and Sciences to Thomas A. Edison, the inventor. Plans for a large public testimonial in New York when the Medal is formally presented to Mr. Edison are nearing completion. It is expected that the event will bring together ambassadors of foreign governments and heads of local scientific societies, universities and industries.

Children may cry for the moon until they get big enough to want the earth.

The outcome of a basketball game and buckshot cakes depends upon the batter.

When in doubt as to what to say upon your thoughts.

FREE DENTAL SERVICE

Nearly One Thousand Saskatchewan People Given Free Treatment By Travelling Clinic

Nearly one thousand people in scattered sections of Saskatchewan, most of whom were from 50 to 75 miles from a dentist, were given free treatment by a travelling clinic. Most of these, moreover, would have been financially unable to secure it, even if dental services had been easily available for them, otherwise.

Approximately 100,000 children throughout Saskatchewan were given a thorough mouth inspection and presented with charts showing the exact state of their oral health and telling them what should be done about it. Hundreds of addresses were delivered in all parts of the province. Moving pictures were shown in theatres and public halls from the U.S. Border to the far north and 95,000 books and pamphlets on dental health distributed free of charge. Over a thousand children wrote essays on mouth health and the foreign as well as the English-speaking population, was supplied with accurate information on the subject.

In brief, in a 60-day period, nearly 550,000 persons were given a course in preventive dentistry.

These are the results of an intensive Mouth Health Programme just completed here under the auspices of the Canadian Dental Hygiene Council. They are given in detail in the report of Dr. Harry S. Thomson, field secretary of the organization. This report, which is to be published shortly, tells the story of one of the most remarkable co-operative efforts for better general health which has ever been successfully attempted in the Dominion.

Fur Farming Leases

Already there are 500 applicants for fur-farming leases in the swampy St. Paul de Melis district of Alberta, recently made available for fur-farming purposes.

Minard's Liniment For Insect Bites

To Attend Dairy Conference
N. S. Gilling, of the dairy faculty of the University of British Columbia, will represent that province at the World's Dairy Conference in London this year.

For Hay Fever—Use Minard's.

Japan Buys Canadian Poultry

Japanese Government To Purchase Birds For Experimental Farms

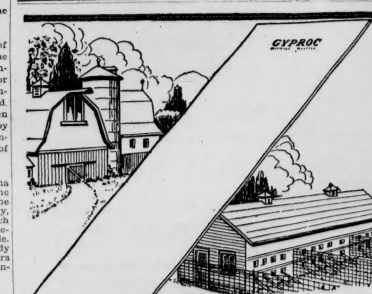

Years ago, when the Japanese Government has sanctioned a programme for the purchase of 1,000 birds annually, for five years, for its five experimental farms. Some of this poultry will probably be bought in British Columbia, and is one more evidence of the apolitical publicity which Canadian stock received at the World's Poultry Congress in Ottawa last year.

Miller's Worm Powder are complete in themselves. They not only drive worms from the system, but repair the damage that worms cause and so invigorate the constitution that it speedily recovers from the disorders of the digestion that are the result of the work of these parasitic intruders. They do their work thoroughly and strength and soundness follow their use.

Linbergh's famous plane, the Spirit of St. Louis, has been placed in the Smithsonian Institute at Washington. Years hence, folks will look at it and say: "Wonder how he ever did it in that old cork!"

For Hay Fever—Use Minard's.

Nearly 30 men of more than 60 years of age are inmates of Canadian prisons.

"Modernize" Your Farm This Modern Way

Nearly every building on the farm can be greatly improved and "modernized" by Gyproc. This famous wallboard is recommended by leading contractors for both new and old construction because it gives advantages offered by no other material—fire safety, rigid strength, economy and cold and heat resistance.

All these vital advantages! And you get them for nothing—because Gyproc costs no more than products that have none of Gyproc's remarkable qualities.

Gyproc makes durable, permanent walls and ceilings in less time and at less cost. Gyproc Joint Filler on the joints assures a smooth, flat surface which takes any decoration—particularly suitable for Alabaster.

Great Western Port

Rising Importance of Vancouver in the Shipment of Grain

Vancouver is taking a proud place in the company of Canada's seaports. News that 71,000,000 bushels of wheat have been shipped from there during the first eight months of the present crop year increases the confidence so general on the coast of late.

When the Prairie crop was being measured last fall, and it was seen that Alberta would have a wheat return of 168,000,000 bushels, it was apparent that Vancouver would be a busy port. Besides the heavy Alberta crop, the reduction in grain rates over the mountains came opportunistically for the coast outlet. By that reduction the "great divide," or point at which rates east and west are equal, was moved again to the eastward, thus bringing a large slice of Western Saskatchewan, as well as all of Alberta, within economic reach of the Pacific port of shipment. It now appears that the forecast of shipment of 75,000,000 bushels out of Vancouver this crop year would be surpassed, and when compared with 45,000,000 bushels in 1926 the gain is important.

Canada's ports in general are on the upgrade. Montreal has led all ports of the continent for six consecutive years in export of grain, and last year reached the tremendous total of 185,000,000 bushels, compared with 120,000,000 in 1926. Quebec Harbor reported an increase of 45 per cent. in general business in the same year. Halifax has a new Harbor Commission, with expectations of corresponding increase of enterprise. St. John continues to do a large winter port business.

Last of all, among the important seaports will shortly come Port Churchill, at the terminus of the Hudson Bay Railway. This port is expected to be ready for use late in 1930. Its advocates expect much from its position and natural advantages, other Canadians only hope they will not be disappointed.—Toronto Globe.

The Child and the Doctor

Two Types of Homes and the Physician's Reception

If you don't like spinach, never by any chance let your infant see you eat it. But it like a man, you eat nothing, for, in the opinion of Dr. P. B. Park (speaking before the Child Welfare Council), "the child of two years is sensitive to suggestion and he needs spinach."

The doctor described vividly two types of homes in which a doctor visits. The first, where the children welcome the man with the black bag and folk with him while he examines their tongues and throats. In the second come a howl goes up the moment the doctor enters the door, and his examination of the children is a fight from start to finish. In the latter type the parents use the doctor as a threat.

America Invests in Canada West

Faith in Canada, and more particularly in western Canada, is shown in the announcement that investments recently amounting to \$5,000,000 will be made in the prairie provinces this year by the International Utilities Corporation of New York, according to F. D. Bacon, vice-president, who was in Calgary recently looking over the company's extensive holdings.

Ship Fish To Africa

Under the leadership of the Canadian Fisheries Association, Canada's fishing industry is about to initiate an effort to benefit by the fish market of the West Coast of Africa, where at present the Norwegian fishing industry is strongly entrenched. The move was decided upon at a recent meeting of the executive of the Association.

The less advice a man has to give the more listeners he will have.

It costs some people more to keep up appearance than it does to live.

"You are drunk. You nearly drove that tree!"

"I am not drunk, and in any case, aren't you driving the car?"—Journal Amuseur, Paris.

ROOTS FOR LIVE STOCK

Pays Feeders To Have Small Quantity On Hand

The Farmer's Advocate says: The average live stock feeder appreciates the value of roots in the ration for all classes of live stock, and even though there is considerable labor involved in the growing and harvesting of the same it pays to have at least a small quantity on hand. Before the advent of the silo the average devotee of turkeys was much greater than it is at the present time. While silage is a succulent feed we believe that roots can be fed with still to advantage. They tempt the appetite, help to regulate the system, and appear to be related by the live stock in conjunction with silage will invariably bring up the milk flow. They help keep the calves thrifty and erect a considerable saving in grain when fed to hogs. Sheep breeders like to have a few roots in the winter and after lambing. Cattle, a well-known breeder, prefers turnips for early feeding and mangels later in the winter and during the spring. In a good cellar, mangels will keep well on to June. Many live stock men prefer roots to silage for sheep and like to have a few mangels for the ewes after lambing. Either turnips or mangels will vary and palatability to the stock.

It is true that roots contain a lot of water. In fact they contain only about 90 per cent. of dry matter, but when one considers the heavy tonnage per acre the dry matter per acre amounts to a good deal. The roots are a little better than the turnip. One thing that must be considered is that nearly 50 per cent. of the dry matter is water. Dairy men, feeding for heavy produce, find that roots have a cooling effect on the digestive troubles with animals. The roots are a safe feed. The same holds true with fattening cattle. Roots are a safe feed.

Where pigs are being raised, it pays to grow mangels, as different farms have shown that with growing pigs there is a saving of approximately 100 pounds of concentrates for every 440 pounds of roots. It is surprising what little grain is required to winter brood sows when they have all the mangels they will eat. Pigs do not seem to relish turnips quite as well, although when pulped and mixed with grain they are readily eaten. Root little pigs will eat mangels without having them pulped.

When it comes to feeding sheep, "Pecis and Pecis" by Henry & Morrison, give results of different trials and the average shows that mangels and roots are about 15 per cent. more than lambs on a similar ration without the roots. In other words, one ton of roots displaced 75 pounds of grain and 355 pounds of hay.

Situation Well Handled

Editor Took Easy Way To Sidelstep Trouble

Ed. Howe, of the Atchafalpa, Kas., Howe's monthly, promising the following about 50 years ago—he is now over 70.

"Last night a large man with a sign in his eye came into this office and inquired if the editor was in. We were alone and he was an exceedingly large man—and there was a certain nervousness about his manner of speech. We said the editor wasn't in, but we would step downstairs and call him. He dropped in a chair, and we went downstairs. On the stairs we met another very large man, who had the same nervousness in his speech. He wanted to know if the editor was upstairs. We told him the editor was upstairs and he said he was exceedingly cross. He went into the office—and a few moments later the most terrific fight we ever heard about began."

Dutch Hens Work Overlives

They are overlying in Holland and poultry farmers are at their wits' end what to do with the over-supply of eggs. At the most important market in Holland no fewer than 5,000,000 eggs were offered in one week, with 10,000,000 more "viable supplies." In Northern Holland some poultry farmers are changing from chickens to ducks, because duck eggs are bought by confectioners in any quantity and at remunerative prices.

Offer: "Walter! This chicken has no withens!"

Walter: "He was a happy and contented chicken, sir, and had nothing to wish for."

Judge: The jury having acquitted you of the charge of bigamy, you are true to leave the court and go to your home.

Prisoner: Thank you, Your Honor, but—where home?

ASK TOM

"If you don't see what you want, let your troubles to the man in the big hat and he'll look after you." Is the advice given everyone going to Jasper. The man in the big hat is Tom McDougall, special representative of the passenger department of the Canadian National Railway at Jasper. He meets every train and his acquaintance range from the Prince of Wales down.

Canada Entering Prosperous Era

Experts Say Prosperity Is Good For the Next Twenty-Five Years

Canada is entering upon an era of independent prosperity good for twenty-five years, regardless of the course of business in the United States, according to a survey of trends of business in Canada just completed by the Sherman Corporation of Canada, Limited (Toronto), engineers and business managers, under the direction of George I. Moore, assistant to John F. Sherman, of the Sherman Co. The investigation shows that the net profit conditions in Canadian industry in 1927 was considerably better than in the United States, 80 per cent. of the Canadian companies which furnished reports declaring increases in net profits in 1927 compared with 1926, whereas a similar analysis of manufacturing enterprises across the border showed only 51 per cent. of the companies with bettered 1927 net profits.

Know What He Wanted

Down in Houston, Tex., a negro came into a lawyer's office and said: "Ah'st just bought a piece of property, and Ah wants the mortgage."

The lawyer returned: "You don't want a mortgage, you want a deed. Still the darkie persisted. 'But, Sam, why don't you want the deed?' asked the lawyer."

"Well, sah," came the reply: "few months ago Ah had sum property down in Ohio. Ah had the deed and another man had the mortgage. Now the other man has de property."

Alberta Film Production

Production of the first picture to be made by British Canadian Pictures, Limited, is expected to start at once it is announced by Guy Wendick, general manager of the company, which was recently organized at Calgary. This picture will be made entirely in Alberta, using local scenery, the Highwood River and the foothills.

How Iceland Was Discovered

Sea Rovers On Voyage Of Discovery Followed Raven To Land

Though Iceland now belongs to Denmark, it was discovered by the MacDougalls, of Argyllshire, ancestors of the family which now resides at Dunellin Castle, and whose eldest daughter is known by the picturesque name of the "Maid of Lorn."

In early days the MacDougalls were sea rovers, and when on their adventurous voyages they always had with them several ravens—their mascot bird. Sailing along the sea northward on a voyage of discovery, a MacDougall chief let loose a raven, hoping it would show where land lay, but the bird returned in the direction whence they had come.

Continuing their voyage, another raven was released, and after circling over the head, it came back to the ship. Knowing the raven's unerring instinct for making for land, they knew there was none near.

On they sailed, and then let loose another bird which set off in the direction they were sailing. Following it, these intrepid voyagers of the Western Isles reached the unknown land of Iceland.

The Editor As a Benefactor

Generous In Giving Space In His Paper For Benefit Of The Community

An exchange remarks: "The editor, as a rule, is short on money but mighty long on giving space in his paper to the things that mean prosperity for his community, and too often the fact is lost sight of that the editor so willingly gives to aid his community and his people is his bread and butter. It is what he lives on, and when he gives it away it is just the same as if the grocer disbursed out gratis his coffee and sugar—yet no one thinks of asking the grocer to give him coffee or sugar."

Have Confidence In Pilot

Reason Women Passengers Take the Air Better Than Men

Women passengers take the air better than men, Major James Fitzmaurice, member of the visiting Irish men trans-Atlantic crew, said at Montreal. He believes there is no reason why there should not be just as many women there as men—that it is not machines, as heavy ones, in flight matters. Major Fitzmaurice said that he believed women took to air much better than men because they had more confidence in the man at the helm than had other men.

Horses and Tractors

According to statistics recently collected from 244,162 farms, there are 6.8 horses to each farm in Manitoba and a tractor to every 4.6 farms in the province. Each Saskatchewan farm has 10.2 horses and there is one tractor to every 4.7 farms. In Alberta, there are 10.8 horses to each farm and one tractor to every 7.5 farms.

M.D.—"Your system is poisoned, you must get rid of your teeth."

Patient—"All right, Doc. 'Throw 'em away, you'll find them under the pillow."

Bookkeeper: "My salary is not what it should be."

Office Boy: "But do you think you could live as if it was?"

Hogs Have Internal Parasites

Precautionary Methods Used To Overcome This Trouble

Much of the unthriftness, bronchitis and "coughs" in young hogs are a result of roundworm infestation. Young hogs infected with these parasites, no matter how well they may be fed, or how comfortable their quarters may be, cannot make good use of their food, causing losses to their owners sometimes to a very discouraging extent. What is known as the roundworm is the cause of much of this trouble. The eggs are taken up by the young pigs, hatch and develop in the intestines where they produce, it is estimated, millions more eggs. The young larvae migrate in the blood stream to the liver, the heart, and the lungs, either interfering with the health of the stock. The most common cause of worm infestation is keeping pigs on the same ground year after year. The ground becomes polluted with eggs of the worms, and with such conditions it is practically impossible to rear young pigs without having them infested with these parasites. This subject has been very carefully studied at the Brandon, Manitoba, Experiment Station, and in his report for last year, the superintendent, Mr. M. J. Tinslie, found it good practice to have all the sows farrow in pens that were thoroughly clean and the young pigs reared on ground that had not been used for sows for a number of years. As a result of these precautions the losses at weaning time were very small. The system of cleaning pens reported by Mr. Tinslie, is to scrub the walls, troughs, and floor of the farrowing pen with boiling water and lye in the strength of one pound of lye in forty gallons of water. In addition to this the sow is washed in warm soap water before she is put in the clean pen. After ten days she is transferred to another clean pen and when her litter are old enough to go outside they are transferred to clean ground. During the time the sow and litter are together they must be moved to a fresh pen or clean ground every ten days. When weaned the young pigs are placed in clean yards with clean cabins and allowed to stay until ready for market.

His Worldly Goods

George, whose only means of support was his rich father, was being married. Everything went well until the telegram had to be sent to the world. "With all my worldly goods I thee endow." The congregation was then started to hear a sermon from the old man. "Heavens," muttered Pa, "there goes his bicycle."

McCall Chooses Qu'Appelle Man Professor P. B. Corbett has been named as the new dean of the Faculty of Law, at a meeting of the governing body of McGill University, Prof. Corbett is a native of Qu'Appelle, Sask.

A Scottish diver has succeeded in playing the bagpipes fifty feet below the water. The idea should be encouraged.

Male Tourist—"What day is this?" Female Tourist—"Monday."

Female Tourist—"Tourist—'Then we're in Rome, Italy."

Ground freezes 100 feet deep in Siberia.

Intelligence Is Limited

But Mind Can Be Cultivated Through Study and Experience

Intelligence is an inherited characteristic which grows year by year in childhood, and is fully developed about 16 or 17, after which you may cultivate the mind through study and experience, but not by the mere use of a brain cell can you increase your "intelligence." Many grown-ups, and some of them successful as the world counts success, if tested for intelligence, would find that their "intelligence" was no more than that of their schoolboy son of twelve.—Glasgow Herald.

Nurse (to reviving patient)—Your appendix, pancreas and spleen have all been safely removed sir.

Midwife—"and all I wanted to see the doctor for was to get a whisky prescription."

He—"Will your father give anything toward my new home?"

She—"He said he'd give you the gate."

Approximately 50,000 passengers arrive daily in New York by automobile.

He—"Football is my favorite game. What's yours?"

She—"Fried venison."

"Your reply, darling, means either the end of my happiness or a great blow to me."—Buen Humor, Madrid.

Periodic Health Examinations

Only Sure Method Available To Safeguard the Public Health

Intelligence, what amounts to a national system of stock-taking will need to be inaugurated if the health of the Dominion is to be properly safeguarded and a large percentage of our present unnecessary disease eliminated.

This was the opinion placed before the Canadian Conference on Social Welfare at its recent gathering in Montreal, by Dr. Gordon Bates, national director of the Canadian Social Hygiene Council.

"We do not know how many healthy Canadians we have nor how many diseased," Dr. Bates said. "We do know that incipient disease of all types develops unnecessarily into serious conditions, thus filling beds in institutions and hospitals for the welfare of persons who should be well."

"I see no other cure for it," he added, "than the adoption of a national periodic health examination scheme. Only by such a method—realized in the form of a law—can we, often, at the time, trivial as we hope to extend our average length of life materially and in the absence of a scheme of this type, I do not see how this preventable illness can be stamped out."

Periodic health examination, itself, is a very simple thing, involving merely an annual check-up of the health just as the engine of a motor-truck is checked periodically to keep it in good running order. By this means it is possible to discover and to prevent the development of many diseases which would otherwise become chronic and often incurable, in their later stages.

People Should Think Peace

World Public Opinion Could Do Much To Outlaw War

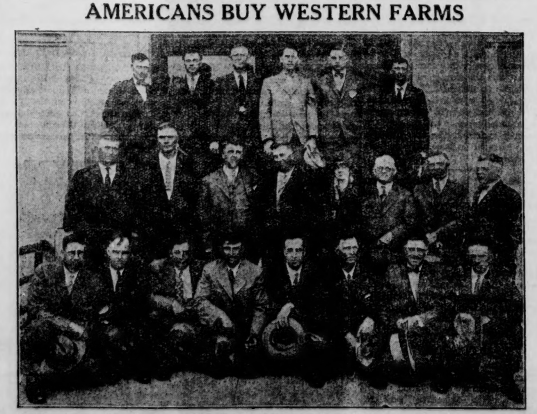

There is nothing that the world needs more than a general campaign to induce thinking in behalf of peace. There is no opinion favors peace, there will be no more war. We approach that state. Nowhere any longer is there willingness to say a word for war, but there remains the fear.

World public opinion is the aggregate of what everybody is thinking, and it is the duty of every individual to think peace. By this means it is possible to discover and to prevent the development of many diseases which would otherwise become chronic and often incurable, in their later stages.

World public opinion is the aggregate of what everybody is thinking, and it is the duty of every individual to think peace. By this means it is possible to discover and to prevent the development of many diseases which would otherwise become chronic and often incurable, in their later stages.

AMERICANS BUY WESTERN FARMS

Eighteen farmers from Nebraska and North Dakota have purchased 3,500 acres of farm land near Estonta in the Snake Lake District, southwest of Saskatoon. They are all experienced farmers with capital and they were brought to Canada by J. B. Boyd, superintendent of the Canadian National Railway, St. Paul, Minn. The group includes agents of the railway company. The Snake Lake District has proved popular with Americans and a large colony is now established there.

Prediction is Made That Canada Will Eventually Produce A Billion Bushels of Wheat a Year

A few days ago Hon. T. A. Cress, former Federal Minister of Agriculture, made the prediction that Canada would eventually produce a billion bushels of wheat a year and find a market for it. At first sight, says The Globe, this appears to be a tremendous volume, but in reality not more than twice the crop produced by the Dominion at the present time. Since approximately 94 per cent. of the wheat crop of Canada is raised in the Prairie provinces this territory would presumably be looked to for the attainment of this figure. This raises the question of the potentiality in agricultural development of the Prairie provinces, and it may be mentioned that in the quarter of a century the wheat production of this area has increased nearly twenty-fold.

At the time of the 1921 census, but 69.2 per cent. of the possible farm land in Manitoba was occupied; 47.1 per cent. in Saskatchewan, and 52.3 per cent. in Alberta. These proportions have not altered drastically since, as new settlement for the main part has been directed away from the communities. In a consideration that it is only about 50 years since the first homestead was filed upon in the area, and the first quarter of a century since the Pacific Railway had been laid, the transformation of the area has been rapid, and promises the development of the next quarter of a century with a marked acceleration effected in all conditions affecting cultivation.

When a census of the Prairie provinces was taken in 1926, it was found that there were 246,128 occupied farms in the territory, and that in Manitoba, 117,787 in Saskatchewan, and 77,130 in Alberta. The total area occupied by farms was 88,929,463 acres, which makes the extent of the average farm throughout the territory approximately 369 acres. These farms, which half a century ago or so were unsettled and unproductive, the buffalo ranging over them and the Indian picking his berries there, given away or sold at infinitesimal figures, have a high value by reason of their productive capacity. Occupied farms in the Prairie provinces are the cheapest of their kind in the world, being valued at 77 per cent. in Manitoba, 52 per cent. in Saskatchewan, and 25 per cent. in Alberta. Yet at these low figures occupied farm land in Manitoba has a total value of \$259,131,119; Saskatchewan, \$1,184,759,099; and Alberta, \$500,014,000, considering the scope of expansion it is to be noted, too, that, according to the 1926 census figures, but 55 per cent. of the acreage of occupied farms has yet been improved.

Already the revenue going to farms in this area is tremendous. This has been particularly true in the past few years of fine crops, and good prices, which have placed the farmers of this territory in a better start position. Field crops alone, which account for about 85 per cent. of the agricultural revenue of that territory, were valued in 1927 at the sum of \$164,097,360, Manitoba receiving \$52,800,000; Saskatchewan, \$309,061,000; and Alberta, \$272,745,360. This would indicate that the total agricultural revenue of that territory was in the neighborhood of \$520,000,000.

Great Demand For Horses

Splendid Reputation For Canadian Animals Established In United States

Horses! Horses! Horses! There are 3,421,837 of them in Canada, the department of agriculture insists, asserting that the buggy ride is still a thing of the present and that the old gray mare is just like she used to be—the safest one-ank driver on the trail.

Ontario, Quebec, and the maritime provinces are experiencing a high demand for both and farm work breeds. Big draught horses are in demand for both and farm work. Saddlehorses and polo ponies are sought after, and have a ready sale. Quality, however, is the insistent keynote not only in Canada but in the United States, where Canadian horses have established for themselves a splendid reputation. The value of Canada's present stock of horses amounts to \$360,418,000.

Farmer: Come on, I'll show you how to milk a cow.

Thief: Perhaps I'll better start on a calf.

All ideas should be carried out and the bad ones should be buried.

W. N. U. 1737

Prospecting In Far North

Bases To Be Established and Supplies Transplanted By Plane

Prospecting by airplane on a large scale is to be carried on this summer by veteran mining men in the far Northern sub-Arctic region. J. Hannum, internationally known prospector, who has formed an aerial exploration company to attempt the experiment, has announced plans for the greatest mineral exploration work ever undertaken in the Northern field. One hundred and fifty prospectors will be taken in this summer, bases established, and supplies transported by plane.

Forty or 50 prospectors will be stationed at each base. Supplied with collapsible canvas, and provisions, they will, in parties of two, start out for specified points. Each prospector will receive a monthly wage, and ten per cent. interest in whatever claims he may make.

The company will have at least ten large airplanes, manned by pilots who have first-hand knowledge of Northern flying conditions. Bases are to be established near The Pas, Man., and several hundred miles further North, probably in the Barren Islands, on the west coast of Hudson's Bay.

Sheep Promotion Plan

Unique Scheme Is Being Undertaken By Manitoba Department Of Agriculture

Following up the scheme proposed by leading Manitoba agriculturists, a sheep promotion plan is being undertaken by the Department of Agriculture. This has been instigated by several firms interested in Manitoba agriculture. A letter has been sent to all rural councils in the province to ascertain the closest possible estimate of the demand for sheep on the farm.

A limited number of sheep will be distributed to farmers this fall, range-bred ewes born in 1927, and the approximate price will be \$1 to \$14 per head. Payment for the sheep will be made by the farmer on a basis of 20 cents cash, 30 per cent. of the balance in 1929, 30 per cent. in 1930, and 40 per cent. in 1931.

Removing Old Landmark

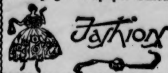

Halfway Hotel In Alberta Is To Be Demolished

Some 23 years ago the Halfway Hotel, a veritable way-side inn, was a favorite stopping place for the freighters and was well known throughout the district. It took its name from being just half-way between Edmonton and Port Saskatchewan on the Port Trail. It has been purchased by the Provincial Government which plans to demolish the building and erect other houses in an scheme of the beautification of the "Mental Institution" which the purchased property adjoins.

Ran Bible As Serial

"The New Era," a weekly newspaper published at Parker, North Dakota, after twenty-two years and eight months, has completed printing the Bible in installments. Charles Hackett, pioneer editor, being the installments and his successors have continued the work.

Winnipeg Newspaper Union

Child's Fajamas

The pajamas shown here are quite attractively fashioned and are a comfortable style. There is a drop-crotch, front-crotch closing, round collar or spread band, patch pocket and long or short sleeves. Sizes 2, 4, 6, 8, 10 and 12 years. Size 4 requires 2 1/2 yards of material, 32-inch, or 2 yards 30-inch material. Price 25 cents the pattern.

Home sewing brings nice clothes within the reach of all, and to follow the mode is delightful when it can be done so easily and economically by following the styles pictured in our new Fashion Book. A chart accompanying each pattern shows the material as it appears when cut. Every detail is explained so that the inexperienced sewer can make without difficulty an attractive dress. Price of the book 10 cents the copy.

Does Not Always Work

Teacher: "Now, children, remember that what you sow, that shall you reap. If you sow turnip seed you will get turnips, and if you sow—"

Johnnie (interrupting): "Please, teacher, I sowed some canary seeds, but it didn't get a canary."

Steel Cable Cuts High

A long steel cable drawn at top speed and fed continually with wet sand, cuts through solid rock in a new type quarry saw. Ties grains of sand, drilled across the rock face, serve as abrasives to groove it at a rate hitherto unknown.

Dora: Has Jean a dependable job?

Ma: Yes, she's bridemaid for a movie actress.

Would Use Molten Steel To Break Big Icebergs That Menace North Atlantic Shipping

Making Hazardous Trip

Try Workmen Going To Build On Floating Dock

On a great floating dock, built for the naval base at Singapore by Swan, Hunter, and Graham Richardson Ltd., in ten months, a number of Try workmen have embarked on a hazardous voyage from the Type to Singapore. The dock, which was inspected at Wallasey by Admiralty officials and engineering experts, is 855 feet long—one of the largest in the world. Three and a half million rivets were used in its construction. It was reduced to sections, which will be towed across 8,500 miles of ocean. The voyage will take four months, provided no storms are encountered. One of the most anxious periods will be the passage through the Suez Canal. There will be a margin of only two or three feet of water between the sides of the dock and the embankment. The greatest navigating skill will have to be exercised, as the slightest deviation from the course will spell disaster.

Has Variety Of Uses

No Part Of Soya Bean Need Be Wasted

The ingredients of the soya bean are such that, taken as a whole, it is one of the finest foods. It is "ground" just like wheat, but the flour it forms is many times more nutritious than wheat flour. From the bean can also be obtained an artificial "milk," which closely resembles and possesses many of the properties of ordinary cow's milk. The variety of uses for soya bean products makes waste almost impossible. What remains after oil or fat has been extracted can all be made into cattle food. It seems a far cry from a bean to a billiard table or an explosion, yet the soya bean provides the raw materials for many familiar objects, ranging from billiard balls to high explosives.

Will Continue Investigation

An item of \$200,000 to continue the investigation of conditions of navigation in Hudson's Strait and the Hudson's Bay passed with little discussion during the consideration of Marine Department estimates in the House of Commons. The Minister of Marine, in reply to a question, stated that all reports received had indicated satisfactory conditions of navigation in the straits.

Improvements On Western Farms

According to a recent census of the farms of the Prairie Provinces, 40.9 per cent. had automobiles; 21.5 per cent. had telephones; 25.5 per cent. had gasoline engines; 21 per cent. had tractors; 2.2 per cent. had auto trucks and 2.1 per cent. had electric light.

Thomas A. Edison set army police to seek some device whereby pollution gas will be used with animal traps.

White-hot steel can split icebergs

into harmless fragments and break up huge ice jams along the North Atlantic steamer route, says Howard T. Barnes, professor of physics in McGill University, Montreal, in a research report to the Engineering Foundation.

Since 1903, Professor Barnes has been making scientific investigations of the physical properties of ice and practical methods of controlling it. The energy from molten steel, he shows, supplies a heat equal or surpasses that of the sun in power to penetrate ice.

For a reasonable expenditure the menace of icebergs can be removed from the North Atlantic steamer route," the scientist asserts. "Also by skilled engineering utilization of physical resources extending over 25 years, the great expense caused by ice at power plants, bridges, and many other structures and the damage from floods caused by ice dams, or jams, can be greatly reduced."

Ice can be broken up by blasting or reduced to water by heat, or integrated by the aid of chemicals. Quick-acting, sure, powerful, inexpensive methods are required. To supply artificially enough heat to melt a berg or jam is beyond the range of feasibility. Skilled, limited applications of heat will, however, accomplish much.

"Thermite can be used effectively at modest cost. Thermite is a mixture of finely powdered aluminum metal and oxide of iron. When properly ignited, it reacts vigorously, generating very high temperatures and producing extremely hot liquid steel. Thermite may be seen in action in city streets where rail points of a trolley line are being welded."

"The energy from this molten steel supplies rays that equal or surpass those of the sun in power to penetrate ice for many feet. The action of the white-hot steel upon the ice is remarkable, converting it into hydrogen and oxygen gases so rapidly that a powerful explosion results."

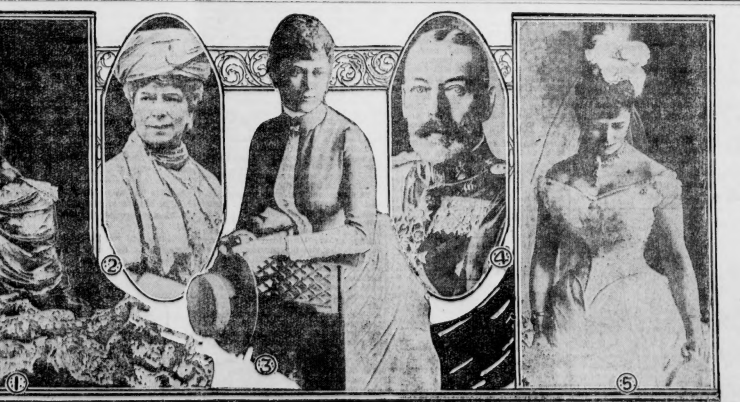

"In this way, a huge jam may readily be broken up so that it will float peacefully harmlessly down the river, or an iceberg be split into fragments so small as to be no menace to commerce."

Newspaper To Be Told

"The news of English we tell the latest, write in perfect style, publish the most careful, do a murder commit we hear with it and publish for it. Do a enormous chiters die we print them in and in borders number with black, so black. Staff each one has been collected and write like the Kipling, the Wells, and the Dickens. We circulate every one of them towns and see we are unfortunate for the advertisements not—"From a Chinese Newspaper.

New Assistant—"What shall I do first?"

Proprietor of Clock Store—"Wind up the business."

Messages of congratulation from all parts of the empire poured into Buckingham Palace upon the occasion of the birthday of Queen Mary, on May 29. The passing of another milestone serves to recall the many changes which her majesty has seen. The eldest child of the Duke and Duchess of York, she lived her early days in England in a Victorian atmosphere. The best features of the old tradition now survive in her own court. Originally the Princess Mary, as she was then known, was engaged to the Duke of Clarence, eldest son of Albert Edward, Prince of Wales, who later became King Edward VII. A month before the date of the wedding the duke died of influenza. The princess was, however, such a favorite with Albert Edward that he arranged that she should marry his second son, George, Duke of York, who is now King George V. The ceremony was performed in St. James' Palace on July 6, 1883. On May 6, 1910, King Edward died, and on June 22, 1911, the coronation of the present monarchs was staged at Westminster Abbey with fashion.

QUALITY is apparent in the longer, lower, more beautiful bodies of the "Bigger and Better" Chevrolet. Quality such as only Fisher craftsmanship and Fisher steel-and-hardwood construction can impart.

And that same impressive standard of quality extends clear through the "Bigger and Better" Chevrolet. . . . down to every last detail of its design and construction.

It is Chevrolet's insistence upon quality that provides the smooth, effortless power of the "Bigger and Better" Chevrolet engine. . . . that gives you such a swift, flashing getaway when you step on the gas. . . . that assures you such safety when you apply the non-locking four-wheel brakes. . . . that gives you so much real motoring pleasure for so many thousands of miles.

It is quality that makes the "Bigger and Better" Chevrolet the world's most luxurious low-priced car. Quality that makes it the world's most outstanding value in the low-priced field.

Accept no verdict but your own. Weigh no evidence but that of Chevrolet's own performance. Judge Chevrolet quality for yourself. . . . by taking a drive today.

The G.M.A.C. "Closed Motor" plan delivers prompt plan for the most business and commercial way of buying your Chevrolet on time. G-8-6-1-2-3-4

WEDDING

Boston—Apply

A very pretty wedding was solemnized at the home of Mrs. Apply in Sibbald, Alta., on Monday, June 11, when her daughter Irene, became the bride of Mr. Bert Boston. The ceremony was performed on the lawn at three o'clock in the afternoon in the presence of about thirty-five guests. The bride was charmingly attired in a dress of blue georgette and carried a bouquet of roses and carnations. After the wedding breakfast which was served in the open in the shade of a beautiful grove of trees, the happy couple left by auto on their honeymoon.

Health Officials to Hold Convention

The annual convention of the Alberta Hospital Association, the Alberta Registered Nurses' Association and the Alberta Public Health Officials' Association will be held in Calgary on Monday and Tuesday, June 25 and 26. An interesting program of value to all those engaged in hospital and public health work is being arranged, and among the speakers who will be heard are a number of outstanding authorities on problems of public health.
